Before I started this it course I was not very good at it. I knew some things but not that much

The learning activity I am writing about is IT.

The learning in IT was about how to use a computer and how to use to use the different computer programmes. The IT course was a bit different from what I expected, because I thought it would be a bit harder than it is. I was also a bit surprised to the amount of things you can do on a computer. I did learn some new things such as how to make my own website, how to make word documents and how to find images and text on the web. The best bits of the IT course are being able to use the internet and playing games. I think the most important bits are learning how to make word documents and how to copy and paste words and pictures. The only time I found anything difficult was at the start of the year when I didn't know much about computers but now I don't find anything difficult. There are something's that are confusing that I don't understand like technical terms relating to the computers. I will try to learn some of these terms so that they won't confuse me anymore. I was disappointed about the speed of the internet at the start of the year because it was very slow but since broadband was installed it is a lot faster. If I was to do anything different the next time I would make my work tidier and neater. This learning might come in useful later on in my life when I am applying for a job that I

need computer skills for. I was happy with the work that I did as I felt it was good work. I am happy with the **IT** class because I like doing it. I don't have a computer at home.

I used to think I was no use at computers, now I think I am quite good. I think computers might be useful to me in the future.
